

$$J = \frac{1}{2}$$

τ discovery paper was PERL 75. $e^+e^- \rightarrow \tau^+\tau^-$ cross-section threshold behavior and magnitude are consistent with pointlike spin-1/2 Dirac particle. BRANDELIK 78 ruled out pointlike spin-0 or spin-1 particle. FELDMAN 78 ruled out $J = 3/2$. KIRKBY 79 also ruled out J =integer, $J = 3/2$.

¹ ABBIENDI 00A fit τ pseudomass spectrum in $\tau \rightarrow \pi^\pm \leq 2\pi^0 \nu_\tau$ and $\tau \rightarrow \pi^\pm \pi^+ \pi^- \leq 1\pi^0 \nu_\tau$ decays. Result assumes $m_{\nu_\tau} = 0$.

² BAI 96 fit $\sigma(e^+e^- \rightarrow \tau^+\tau^-)$ at different energies near threshold.

³ ALBRECHT 92M fit τ pseudomass spectrum in $\tau^- \rightarrow 2\pi^- \pi^+ \nu_\tau$ decays. Result assumes $m_{\nu_\tau} = 0$.

⁴ BACINO 78B value comes from $e^\pm X^\mp$ threshold. Published mass 1782 MeV increased by 1 MeV using the high precision $\psi(2S)$ mass measurement of ZHOLENTZ 80 to eliminate the absolute SPEAR energy calibration uncertainty.

⁵ BALEST 93 fit spectra of minimum kinematically allowed τ mass in events of the type $e^+e^- \rightarrow \tau^+\tau^- \rightarrow (\pi^+ n\pi^0 \nu_\tau)(\pi^- m\pi^0 \nu_\tau)$ $n \leq 2, m \leq 2, 1 \leq n+m \leq 3$. If $m_{\nu_\tau} \neq 0$, result increases by $(m_{\nu_\tau}^2 / 1100)$ MeV.

⁶ BAI 92 fit $\sigma(e^+e^- \rightarrow \tau^+\tau^-)$ near threshold using $e\mu$ events.

$$(m_{\tau^+} - m_{\tau^-}) / m_{\text{average}}$$

A test of CPT invariance.

τ MAGNETIC MOMENT ANOMALY

The q^2 dependence is expected to be small providing no thresholds are nearby.

$$\mu_\tau / (e\hbar/2m_\tau) - 1 = (g_\tau - 2)/2$$

For a theoretical calculation [$(g_\tau - 2)/2 = 11773(3) \times 10^{-7}$], see SAMUEL 91B.

⁷ GONZALEZ-SPRINBERG 00 use data on tau lepton production at LEP1, SLC, and LEP2, and data from colliders and LEP2 to determine limits. Assume imaginary component is zero.

⁸ ACKERSTAFF 98N use $Z \rightarrow \tau^+\tau^-\gamma$ events. The limit applies to an average of the form factor for off-shell τ 's having p^2 ranging from m_τ^2 to $(M_Z - m_\tau)^2$.

⁹ ESCRIBANO 97 use preliminary experimental results.

¹⁰ESCRIBANO 93 limit derived from $\Gamma(Z \rightarrow \tau^+ \tau^-)$, and is on the absolute value of the magnetic moment anomaly.

¹¹SILVERMAN 83 limit is derived from $e^+ e^- \rightarrow \tau^+ \tau^-$ total cross-section measurements for q^2 up to $(37 \text{ GeV})^2$.

τ ELECTRIC DIPOLE MOMENT (d_τ)

A nonzero value is forbidden by both T invariance and P invariance.

The q^2 dependence is expected to be small providing no thresholds are nearby.

Re(d_τ)

**Lepton Family number (LF), Lepton number (L),
or Baryon number (B) violating modes**
(In the modes below, ℓ means a sum over e and μ modes)

L means lepton number violation (e.g. $\tau^- \rightarrow e^+\pi^-\pi^-$). Following common usage, LF means lepton family violation *and not* lepton number violation (e.g. $\tau^- \rightarrow e^-\pi^+\pi^-$). B means baryon number violation.

[a] Basis mode for the τ .

[b] See the Particle Listings below for the energy limits used in this measurement.

CONSTRAINED FIT INFORMATION

An overall fit to 70 branching ratios uses 139 measurements and one constraint to determine 30 parameters. The overall fit has a $\chi^2 = 74.9$ for 110 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients $\langle \delta x_i \delta x_j \rangle / (\delta x_i \delta x_j)$, in percent, from the fit to the branching fractions, $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$. The fit constrains the x_i whose labels appear in this array to sum to one.

τ^- BRANCHING RATIOS

$$\Gamma(\text{particle}^- \geq 0 \text{ neutrals} \geq 0 K_L^0 \nu_\tau \text{ ("1-prong")}) / \Gamma_{\text{total}} \quad \Gamma_1 / \Gamma$$

$$\Gamma_1 / \Gamma = (\Gamma_3 + \Gamma_5 + \Gamma_{10} + \Gamma_{11} + \Gamma_{14} + \Gamma_{16} + \Gamma_{20} + \Gamma_{23} + \Gamma_{26} + \Gamma_{27} + \Gamma_{29} + 0.6569\Gamma_{35} + 0.6569\Gamma_{37} + 0.6569\Gamma_{40} + 0.6569\Gamma_{42} + 0.4316\Gamma_{46} + 0.708\Gamma_{124} + 0.715\Gamma_{126} + 0.09\Gamma_{144} + 0.09\Gamma_{145}) / \Gamma$$

The charged particle here can be e , μ , or hadron. In many analyses, the sum of the topological branching fractions (1, 3, and 5 prongs) is constrained to be unity. Since the 5-prong fraction is very small, the measured 1-prong and 3-prong fractions are highly correlated and cannot be treated as independent quantities in our overall fit. We arbitrarily choose to use the 3-prong fraction in our fit, and leave the 1-prong fraction out. We do, however, use these 1-prong measurements in our average below. The measurements used only for the average are marked "avg," whereas "f&a" marks a result used for the fit and the average.

Data marked "avg" are highly correlated with data appearing elsewhere in the Listings, and are therefore used for the average given below but not in the overall fits. "f&a" marks results used for the fit and the average.

To minimize the effect of experiments with large systematic errors, we exclude experiments which together would contribute 5% of the weight in the average.

0.31 ± 0.12 ± 0.04	f&a	ACCIARRI	95F L3	1991–1993 LEP runs

¹²⁰ BARATE 98E obtain this value by adding twice their $B(\pi^- K_S^0 K_S^0 \nu_\tau)$ value to their $B(\pi^- K_S^0 K_L^0 \nu_\tau)$ value.

¹²¹ We multiply the COAN 96 measurement $B(h^- K_S^0 K_S^0 \nu_\tau) = (0.023 \pm 0.005 \pm 0.003)\%$ by 4 to obtain the listed value. This factor of 1/4 is uncertain, and might be as large as 1/2, due to Bose-Einstein correlations and the resonant parentage of this state.

$\Gamma(\pi^- K^0 \bar{K}^0 \nu_\tau) / \Gamma_{\text{total}} (\%)$

$\Gamma(\pi^- K_S^0 K_S^0 \nu_\tau) / \Gamma_{\text{total}}$

$\Gamma_{47} / \Gamma = \frac{1}{4} \Gamma_{46} / \Gamma$

Bose-Einstein correlations might make the mixing fraction different than 1/4.

0.742±0.035±0.020	8000	ALBRECHT	90E ARG	$E_{cm}^{ee} = 9.4-10.6$ GeV

226 Combined fit to ARGUS tau decay parameter measurements in ALBRECHT 98, ALBRECHT 95C, ALBRECHT 93G, and ALBRECHT 94E. ALBRECHT 98 use tau pair events of the type $\tau^- \tau^+ \rightarrow (\ell^- \bar{\nu}_\ell \nu_\tau)(\pi^+ \pi^0 \bar{\nu}_\tau)$, and their charged conjugates.

227 ABE 970 assume $\eta^\tau = 0$ in their fit. Letting η^τ vary in the fit gives a ρ^τ value of $0.69 \pm 0.13 \pm 0.05$.

228 Value is from a simultaneous fit for the ρ^τ and η^τ decay parameters to the lepton energy spectrum. Not independent of ALBRECHT 90E ρ^τ (e or μ) value which assumes $\eta^\tau = 0$. Result is strongly correlated with ALBRECHT 95C.

229 Combined fit to ARGUS tau decay parameter measurements in ALBRECHT 95C, ALBRECHT 93G, and ALBRECHT 94E.

$\rho^\tau(e)$ PARAMETER

(V-A) theory predicts $\rho = 0.75$.

²⁵¹ACKERSTAFF 97R obtain this result with a model independent fit to the hadronic structure functions. Fitting with the model of Kuhn and Santamaria (ZPHY **C48**, 445 (1990)) gives $0.87 \pm 0.16 \pm 0.04$, and with the model of of Isgur *et al.* (PR **D39**,1357 (1989)) they obtain $1.20 \pm 0.21 \pm 0.14$.²⁵²AKERS 95P obtain this result with a model independent fit to the hadronic structure functions. Fitting with the model of Kuhn and Santamaria (ZPHY **C48**, 445 (1990)) gives $0.87 \pm 0.27 \begin{smallmatrix} +0.05 \\ -0.06 \end{smallmatrix}$, and with the model of of Isgur *et al.* (PR **D39**,1357 (1989)) they obtain $1.10 \pm 0.31 \begin{smallmatrix} +0.13 \\ -0.14 \end{smallmatrix}$. **$\xi^T(\text{all hadronic modes})$ PARAMETER** $(V-A)$ theory predicts $\xi^T = 1$.

253 ABREU 00L use $\tau^- \rightarrow h^- \geq 0\pi^0\nu_\tau$ decays.

254 ASNER 00 use $\tau^- \rightarrow \pi^- 2\pi^0\nu_\tau$ decays.

255 ACCIARRI 98R use $\tau \rightarrow \pi\nu_\tau$, $\tau \rightarrow K\nu_\tau$, and $\tau \rightarrow \rho\nu_\tau$ decays.

256 ACKERSTAFF 97R use $\tau \rightarrow a_1\nu_\tau$ decays.

257 ALEXANDER 97F use $\tau \rightarrow \rho\nu_\tau$ decays.

258 COAN 97 use $h^+ h^-$ energy correlations.

259 Combined fit to ARGUS tau decay parameter measurements in ALBRECHT 95C, ALBRECHT 93G, and ALBRECHT 94E.

260 BUSKULIC 95D use $\tau \rightarrow \pi\nu_\tau$, $\tau \rightarrow \rho\nu_\tau$, and $\tau \rightarrow a_1\nu_\tau$ decays.

261 Uses $\tau \rightarrow a_1\nu_\tau$ decays. Replaced by ALBRECHT 95C.

262 ACCIARRI 96H use $\tau \rightarrow \pi\nu_\tau$, $\tau \rightarrow K\nu_\tau$, and $\tau \rightarrow \rho\nu_\tau$ decays.

263 AKERS 95P use $\tau \rightarrow a_1\nu_\tau$ decays.

264 ALBRECHT 94E measure the square of this quantity and use the sign determined by ALBRECHT 90I to obtain the quoted result. Uses $\tau \rightarrow a_1\nu_\tau$ decays. Replaced by ALBRECHT 95C.

265 BUSKULIC 94D use $\tau \rightarrow \pi\nu_\tau$ and $\tau \rightarrow \rho\nu_\tau$ decays. Superseded by BUSKULIC 95D.
