

$$I(J^P) = 0(0^-)$$

The angular distributions of the decays of the ϕ and $\bar{K}^*(892)^0$ in the $\phi\pi^+$ and $K^+\bar{K}^*(892)^0$ modes strongly indicate that the spin is zero. The parity given is that expected of a $c\bar{s}$ ground state.

D_s^\pm MASS

The fit includes D^\pm , D^0 , D_s^\pm , $D^{*\pm}$, D^{*0} , and $D_s^{*\pm}$ mass and mass difference measurements. Measurements of the D_s^\pm mass with an error greater than 10 MeV are omitted from the fit and average. A number of early measurements have been omitted altogether.

- [a] For now, we average together measurements of the $X e^+ \nu_e$ and $X \mu^+ \nu_\mu$ branching fractions. This is the *average*, not the *sum*.
- [b] The branching fraction for this mode may differ from the sum of the submodes that contribute to it, due to interference effects. See the relevant papers.
- [c] This branching fraction includes all the decay modes of the final-state resonance.
- [d] This comes from a K -matrix parametrization of the $\pi^+ \pi^-$ S -wave and is a sum over the $f_0(980)$, $f_0(1300)$, $f_0(1200-1600)$, $f_0(1500)$, and $f_0(1750)$. Not all of these correspond to particles in our Tables.
- [e] This mode is not a useful test for a $\Delta C=1$ weak neutral current because both quarks must change flavor in this decay.
- [f] The value is for the sum of the charge states or particle/antiparticle states indicated.

CONSTRAINED FIT INFORMATION

An overall fit to 11 branching ratios uses 19 measurements and one constraint to determine 9 parameters. The overall fit has a $\chi^2 = 11.4$ for 11 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients $\langle \delta x_i \delta x_j \rangle / (\delta x_i \delta x_j)$, in percent, from the fit to the branching fractions, $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$. The fit constrains the x_i whose labels appear in this array to sum to one.

D_s^+ DECAY CONSTANT

Revised March 2006 by A. Edwards and P. Burchat (Stanford University)

In the Standard Model, the D_s^+ leptonic branching fractions are related to the D_s^+ decay constant f_{D_s} by the equation [1]

$$B(D_s^+ \rightarrow \ell^+ \nu_\ell) = \frac{G_F^2}{8\pi} |V_{cs}|^2 f_{D_s}^2 \frac{\tau_{D_s}}{\hbar} m_{D_s} m_\ell^2 \left(1 - \frac{m_\ell^2}{m_{D_s}^2}\right)^2. \quad (1)$$

Hence, measurements of $B(D_s^+ \rightarrow \ell^+ \nu_\ell)$ can be used to extract f_{D_s} . The most precise measurements of $D_s^+ \rightarrow \ell^+ \nu_\ell$ branching fractions come from L3 (ACCIARRI 97F), CLEO (CHADHA 98), BEATRICE (ALEXANDROV 00), OPAL (ABBIENDI 01L), and ALEPH (HEISTER 02I); see the end of the D_s^+ Data Listings for the references. All of these measurements either explicitly or implicitly measure the leptonic branching fraction relative to the branching fraction for $D_s^+ \rightarrow \phi\pi^+$. This fraction has, since our 2004 edition, changed from $3.6 \pm 0.9\%$ to $4.4 \pm 0.6\%$. The $D_s^+ \rightarrow \ell^+ \nu_\ell$ measurements of CLEO and BEATRICE are explicitly normalized to $D_s^+ \rightarrow \phi\pi^+$, and so can be easily updated. The LEP experiments (L3, OPAL, ALEPH) share a 23% correlated uncertainty in the normalization of the

leptonic branching fraction. They use the partial decay rate for $Z \rightarrow c\bar{c}$ and the D_s^+ production rate in $Z \rightarrow c\bar{c}$ events, which in turn depends on the assumed value of $B(D_s^+ \rightarrow \phi\pi^+)$.

We determine an average value of f_{D_s} from the above-mentioned five most precise measurements of the $D_s^+ \rightarrow \ell^+\nu_\ell$ branching fractions, assuming lepton universality, taking into account correlated uncertainties, and using a consistent and up-to-date set of input parameters [2] for the μ , τ , and D_s^+ masses, the D_s^+ lifetime, V_{cs} , $B(D_s^+ \rightarrow \phi\pi^+)$, and other relevant branching fractions. Although the uncertainty on $B(D_s^+ \rightarrow \phi\pi^+)$ is by far the largest uncertainty, we also take into account correlated uncertainties in other input parameters. Using both $D_s^+ \rightarrow \mu^+\nu_\mu$ and $D_s^+ \rightarrow \tau^+\nu_\tau$ branching fractions, and assuming lepton universality, we obtain

$$B(D_s^+ \rightarrow \mu^+\nu_\mu) = 0.0074 \pm 0.0013 . \quad (2)$$

Using this value (which is not the same as the $D_s^+ \rightarrow \mu^+\nu_\mu$ branching fraction in our Summary Tables, because we do not there use lepton universality), and including the relatively minor uncertainties on the other parameters in Eq. (1), we extract the world average D_s^+ decay constant:

$$f_{D_s} = (294 \pm 27) \text{ MeV} . \quad (3)$$

<u>COMMENT</u>	

• • • We do not use the following data for averages, fits, limits, etc. • • •

$0.0068 \pm 0.0011 \pm 0.0018$	553	⁵ HEISTER	02l	ALEP	Z decays
$0.015^{+0.013}_{-0.006} +^{+0.003}_{-0.002}$	3	⁶ BAI	95	BES	$e^+ e^- \rightarrow D_s^+ D_s^-$
$0.004^{+0.0018}_{-0.0014} +^{+0.0020}_{-0.0019}$	8	⁷ AOKI	93	WA75	π^- emulsion 350 GeV
<0.03	0	⁸ AUBERT	83	SPEC	μ^+ Fe, 250 GeV

⁵ This HEISTER 02l result is not actually an independent measurement of the absolute $\mu^+ \nu_\mu$ branching fraction, but is in fact based on our $\phi \pi^+$ branching fraction of $3.6 \pm 0.9\%$, so it cannot be included in our overall fit. HEISTER 02l combines its $D_s^+ \rightarrow \tau^+ \nu_\tau$ and $\mu^+ \nu_\mu$ branching fractions to get $f_{D_s} = (285 \pm 19 \pm 40)$ MeV.

⁶ BAI 95 uses one actual $D_s^+ \rightarrow \mu^+ \nu_\mu$ event together with two $D_s^+ \rightarrow \tau^+ \nu_\tau$ events and assumes μ - τ universality. This value of $\Gamma(\mu^+ \nu_\mu)/\Gamma_{\text{total}}$ gives a pseudoscalar decay constant of $(430^{+150}_{-130} \pm 40)$ MeV.

⁷ AOKI 93 assumes the ratio of production cross sections of the D_s^+ and D^0 is 0.27. The value of $\Gamma(\mu^+ \nu_\mu)/\Gamma_{\text{total}}$ gives a pseudoscalar decay constant $f_{D_s} = (232 \pm 45 \pm 52)$ MeV.

⁸ AUBERT 83 assume that the D_s^\pm production rate is 20% of total charm production rate.

• • • We do not use the following data for averages, fits, limits, etc. • • •

0.245 ± 0.052 ± 0.074 39 ¹¹ ACOSTA 94 CLE2 See CHADHA 98

⁹ ALEXANDROV 00 uses $f_D^2/f_{D_s}^2 = 0.82 \pm 0.09$ from a lattice-gauge-theory calculation to get the relative numbers of $D^+ \rightarrow \mu^+ \nu_\mu$ and $D_s^+ \rightarrow \mu^+ \nu_\mu$ events. The present result leads to $f_{D_s} = (323 \pm 44 \pm 36)$ MeV.

¹⁰ CHADHA 98 obtains $f_{D_s} = (280 \pm 19 \pm 28 \pm 34)$ MeV from this measurement, using $\Gamma(D_s^+ \rightarrow \phi \pi^+)/\Gamma(\text{total}) = 0.036 \pm 0.009$.

¹¹ ACOSTA 94 obtains $f_{D_s} = (344 \pm 37 \pm 52 \pm 42)$ MeV from this measurement, using $\Gamma(D_s^+ \rightarrow \phi \pi^+)/\Gamma(\text{total}) = 0.037 \pm 0.009$.

$\Gamma(\mu^+ \nu_\mu)/\Gamma(\phi \ell^+ \nu_\ell)$

Γ_7/Γ_9

$\Gamma(\phi \ell^+ \nu_\ell)$ is an average of $\Gamma(\phi e^+ \nu_e)$ and $\Gamma(\phi \mu^+ \nu_\mu)$

VALUE	EVTS	DOCUMENT ID	TECN	COMMENT

0.25 ± 0.07 OUR FIT Error includes scale factor of 1.5.

0.16 ± 0.06 ± 0.03 23 ¹² KODAMA 96 E653 π^- emulsion, 600 GeV

¹² KODAMA 96 obtains $f_{D_s} = (194 \pm 35 \pm 20 \pm 14)$ MeV from this measurement, using $\Gamma(D_s^+ \rightarrow \phi \ell^+ \nu)/\Gamma_{\text{total}} = 0.0188 \pm 0.0029$. The third error is from the uncertainty on $\phi \ell^+ \nu_\ell$ branching fraction.

$\Gamma(\tau^+ \nu_\tau)/\Gamma_{\text{total}}$ Γ_8/Γ

VALUE	EVTS	DOCUMENT ID	TECN	COMMENT
0.064 ± 0.015 OUR AVERAGE				
0.0579 ± 0.0077 ± 0.0184	881	¹³ HEISTER	02I ALEP	Z decays
0.070 ± 0.021 ± 0.020	22	¹⁴ ABBIENDI	01L OPAL	$D_S^{*+} \rightarrow \gamma D_S^+$ from Z's
0.074 ± 0.028 ± 0.024	16	¹⁵ ACCIARRI	97F L3	$D_S^{*+} \rightarrow \gamma D_S^+$ from Z's

¹³ HEISTER 02I combines its $D_S^+ \rightarrow \tau^+ \nu_\tau$ and $\mu^+ \nu_\mu$ branching fractions to get $f_{D_S} = (285 \pm 19 \pm 40)$ MeV.

¹⁴ This ABBIENDI 01L value gives a decay constant f_{D_S} of $(286 \pm 44 \pm 41)$ MeV.

¹⁵ The second ACCIARRI 97F error here combines in quadrature systematic (0.016) and normalization (0.018) errors. The branching fraction gives $f_{D_S} = (309 \pm 58 \pm 33 \pm 38)$ MeV.

$\Gamma(\phi \ell^+ \nu_\ell)/\Gamma(\phi \pi^+)$ Γ_9/Γ_{15}

For now, we average together measurements of the $\Gamma(\phi e^+ \nu_e)/\Gamma(\phi \pi^+)$ and $\Gamma(\phi \mu^+ \nu_\mu)/\Gamma(\phi \pi^+)$ ratios. See the end of the D_S^+ Listings for measurements of $D_S^+ \rightarrow \phi \ell^+ \nu_\ell$ form-factor ratios.

- 21 AUBERT 05V uses the ratio of $B^0 \rightarrow D^{*-} D_s^{*+}$ events seen in two different ways, in both of which the $D^{*-} \rightarrow \bar{D}^0 \pi^-$ decay is fully reconstructed: (1) The $D_s^{*+} \rightarrow D_s^+ \gamma$, $D_s^+ \rightarrow \phi \pi^+$ decay is fully reconstructed. (2) The number of events in the D_s^+ peak in the missing mass spectrum against the $D^{*-} \gamma$ is measured.
- 22 ARTUSO 96 uses partially reconstructed $\bar{B}^0 \rightarrow D^{*+} D_s^{*-}$ decays to get a model-independent value for $\Gamma(D_s^- \rightarrow \phi \pi^-)/\Gamma(D^0 \rightarrow K^- \pi^+)$ of $0.92 \pm 0.20 \pm 0.11$.
- 23 BAI 95C uses $e^+ e^- \rightarrow D_s^+ D_s^-$ events in which one or both of the D_s^\pm are observed to obtain the first model-independent measurement of the $D_s^+ \rightarrow \phi \pi^+$ branching fraction, without assumptions about $\sigma(D_s^\pm)$. However, with only two “doubly-tagged” events, the statistical error is very large. ADLER 90B used the same method to set a limit.
- 24 BUTLER 94, FRABETTI 93G, ALBRECHT 91, ALEXANDER 90B, and ANJOS 90B measure the ratio $\Gamma(D_s^+ \rightarrow \phi \ell^+ \nu_\ell)/\Gamma(D_s^+ \rightarrow \phi \pi^+)$, where $\ell = e$ and/or μ , and then use a theoretical calculation of the ratio of widths $\Gamma(D_s^+ \rightarrow \phi \ell^+ \nu_\ell)/\Gamma(D^+ \rightarrow \bar{K}^{*0} \ell^+ \nu)$. Not everyone uses the same value for this ratio.
- 25 The two MUHEIM 94 values here are model-dependent calculations based on distinct data sets. The first uses measurements of the $D_2^*(2460)^0$ and $D_{s1}(2536)^+$, the second uses B -decay factorization and $\Gamma(D_s^+ \rightarrow \mu^+ \nu_\mu)/\Gamma(D_s^+ \rightarrow \phi \ell^+ \nu_\ell)$. A third calculation using the semileptonic width of $D_s^+ \rightarrow \phi \ell^+ \nu_\ell$ is not independent of other results listed here. Note also the upper limit, based on the sum of established D_s^+ branching ratios.
- 26 ALVAREZ 90C relies on the Lund model to estimate the ratio of D_s^+ to D^+ cross sections.
- 27 Values based on crude estimates of the D_s^\pm production level. DERRICK 85B errors are statistical only.

$\Gamma(\phi \pi^+, \phi \rightarrow K^+ K^-)/\Gamma(\phi \pi^+)$

This is the "fit fraction" from the Dalitz-plot analysis.

VALUE	DOCUMENT ID	TECN	COMMENT
$0.8704 \pm 0.0560 \pm 0.0438$	³¹ LINK	04 FOCS	Dalitz fit, 1475 ± 50 evts

³¹LINK 04 borrows a K-matrix parametrization from ANISOVICH 03 of the full $\pi-\pi$ S-wave isoscalar scattering amplitude to describe the $\pi^+ \pi^-$ S-wave component of the $\pi^+ \pi^+ \pi^-$ state. The fit fraction given above is a sum over five f_0 mesons, the $f_0(980)$, $f_0(1300)$, $f_0(1200-1600)$, $f_0(1500)$, and $f_0(1750)$. See LINK 04 for details and discussion.

$\Gamma(f_0(980)\pi^+, f_0 \rightarrow \pi^+\pi^-)/\Gamma(\pi^+\pi^+\pi^-)$ Γ_{44}/Γ_{41}

This is the "fit fraction" from the Dalitz-plot analysis.

$D_s^+ - D_s^-$ T-VIOLATING DECAY-RATE ASYMMETRIES

$A_{Tviol}(K_S^0 K^\pm \pi^+ \pi^-)$ in $D_s^\pm \rightarrow K_S^0 K^\pm \pi^+ \pi^-$

$C_T \equiv \vec{p}_{K^+} \cdot (\vec{p}_{\pi^+} \times \vec{p}_{\pi^-})$ is a T -odd correlation of the K^+ , π^+ , and π^- momenta for the D_s^+ . $\bar{C}_T \equiv \vec{p}_{K^-} \cdot (\vec{p}_{\pi^-} \times \vec{p}_{\pi^+})$ is the corresponding quantity for the D_s^- . $A_T \equiv [\Gamma(C_T > 0) - \Gamma(C_T < 0)] / [\Gamma(C_T > 0) + \Gamma(C_T < 0)]$ would, in the absence of strong phases, test for T violation in D_s^+ decays (the Γ 's are partial widths). With $\bar{A}_T \equiv [\Gamma(-\bar{C}_T > 0) - \Gamma(-\bar{C}_T < 0)] / [\Gamma(-\bar{C}_T > 0) + \Gamma(-\bar{C}_T < 0)]$, the asymmetry $A_{Tviol} \equiv \frac{1}{2}(A_T - \bar{A}_T)$ tests for T violation even with nonzero strong phases.
