

$I(J^P) = \frac{1}{2}(\frac{1}{2}^+)$  Status: \*

## OMMITTED FROM SUMMARY TABLE

ABREU 95V observe an excess of same-sign  $\Xi^\mp \ell^\mp$  events in jets, which they interpret as  $\Xi_b^- \rightarrow \Xi^- \ell^- \bar{\nu}_\ell X$ . They find that the probability for these events to come from non- $b$ -baryon decays is less than  $5 \times 10^{-4}$  and that  $\Lambda_b$  decays can account for less than 10% of these events.

In the quark model,  $\Xi_b^0$  and  $\Xi_b^-$  are an isodoublet ( $usb$ ,  $dsb$ ) state; the lowest  $\Xi_b^0$  and  $\Xi_b^-$  ought to have  $J^P = 1/2^+$ . None of  $I$ ,  $J$ , or  $P$  have actually been measured.

## $\Xi_b$ MEAN LIFE

This is actually a measurement of the average lifetime of  $b$ -baryons that decay to a jet containing a same-sign  $\Xi^\mp \ell^\mp$  pair. Presumably the mix is mainly  $\Xi_b$ , with some  $\Lambda_b$ .

"OUR EVALUATION" is an average using rescaled values of the data listed below. The average and rescaling were performed by the Heavy Flavor Averaging Group (HFAG) and are described at <http://www.slac.stanford.edu/xorg/hfag/>. The averaging/rescaling procedure takes into account corrections between the measurements and asymmetric lifetime errors.

VALUE ( $10^{-12}$ s)	EVTS	DOCUMENT ID	TECN	COMMENT
<b><math>1.39^{+0.34}_{-0.28}</math> OUR EVALUATION</b>				
$1.35^{+0.37}_{-0.28} + 0.15$		<sup>1</sup> BUSKULIC	96T ALEP	$e^+ e^- \rightarrow Z$
$1.5^{+0.7}_{-0.4} \pm 0.3$	8	<sup>2</sup> ABREU	95V DLPH	$e^+ e^- \rightarrow Z$

<sup>1</sup> Excess  $\Xi^- \ell^-$ , impact parameters.

<sup>2</sup> Excess  $\Xi^- \ell^-$ , decay lengths.

## $\Xi_b$ DECAY MODES

Mode	Fraction ( $\Gamma_i/\Gamma$ )
$\Gamma_1 \quad \Xi^- \ell^- \bar{\nu}_\ell$ anything	seen

## $\Xi_b$ BRANCHING RATIOS

$\Gamma(\Xi^- \ell^- \bar{\nu}_\ell \text{anything})/\Gamma_{\text{total}}$	$\Gamma_1/\Gamma$
seen	<sup>3</sup> BUSKULIC
seen	ABREU

<sup>3</sup> BUSKULIC 96T measures  $[B(b \rightarrow \Xi_b^-) \times B(\Xi_b^- \rightarrow \Xi^- \ell^- \bar{\nu}_\ell \text{anything})] = (5.4 \pm 1.1 \pm 0.8) \times 10^{-4}$  per lepton species, averaged over  $e$  and  $\mu$ .
