

**$\Xi_c(2790)$**  $I(J^P) = \frac{1}{2}(\frac{1}{2}^-)$  Status: \*\*\*

Seen in  $\Xi'_c \pi$  decays. The simplest assignment, based on the mass, width, and decay mode, is that this belongs in the same SU(4) multiplet as the  $\Lambda(1405)$  and the  $\Lambda_c(2595)^+$ , but the spin and parity have not been measured.

 **$\Xi_c(2790)$  MASSES**

The masses are obtained from the mass-difference measurements that follow.
